ABOUT THE COVER

In 1995, USA Today reported that three-year old Jacob Swartz of Quinlan, Texas was mauled by a cougar. His six-year old sister, Erin, also suffered injuries. This was not some random, unpreventable attack in the woods; the cougar was the family pet who escaped while his pen was being cleaned. The cougar was shot and killed. Though big cats, like the cougar on our cover (photographed by Frans Lanting courtesy of Minden Pictures), may start out as cute and cuddly cubs, they eventually grow into their wild and potentially dangerous natural selves. Increasingly, people are keeping wild animals as pets: lions, tigers, bears, bobcats, reptiles, amphibians, and rodents from across the globe. It is outright dangerous to keep exotic animals as companions; they can hurt their human attendants, escape and harm other domestic and native animals, and carry diseases such as monkeypox that can be transferred to humans. Exotic animals in poor facilities such as roadside zoos can pose similar dangers as their keepers are ill-equipped to care for these animals appropriately (see story pages 8-10).

AWI Fights for Primates in the Courts

Chico, a 25-year old chimpanzee, spends his days in solitary confinement at a roadside zoo in South Carolina. As a result of his deprivation, he engages in stereotypic rocking, pacing, and head bobbing, indicators that Chico is psychologically ill. Aberrant behaviors such as this would not be seen if he were in a natural environment. Chico is not alone. "It is still common practice in research institutions to keep nonhuman primates singly housed in subminimal sized cages with little to do but engage in stereotypical locomotion or behavioral pathologies resulting from boredom and frustration," said Victor Reinhardt, AWI’s Laboratory Animal Advisor, who was the clinical veterinarian in a primate research facility for more than a decade.

More than 100,000 non-human primates, intelligent, social beings, are confined in zoos, experimental laboratories, and dealer premises across the country. Each of these individuals deserves to be housed in an enriched environment with the opportunity to share it with at least one companion. In 1985 Congress considered this perspective and adopted an amendment to the Animal Welfare Act (AWA) mandating "a physical environment adequate to promote the psychological wellbeing of primates." This would include providing the animals with companions, sufficient space to engage in species-typical locomotion, elevated resting structures, foraging devices and manipulanda (toys).

On July 22, the Animal Welfare Institute joined the Animal Legal Defense Fund (ALDF) and three individuals in bringing suit against the United States Department of Agriculture (USDA) for its failure to adequately implement this vital legal mandate. Four years ago, the USDA had developed a detailed, scientifically sound Policy providing comprehensive information on how to promote psychological well-being of primates (see AWI Quarterly, Fall 2002). If finalized, this report would be of practical help to USDA inspectors who must enforce the law and to primate facilities licensed or registered under the AWA. However, USDA has shelved this Policy.

AWI’s lawsuit would require USDA to make a final decision regarding its Primate Policy within 30 days. As world-renowned chimpanzee expert and friend of AWI, Jane Goodall, noted, “It is a disgrace that after all these years, Congressional intent has been brushed aside at the expense of these magnificent beings.”

AWI is grateful for the legal representation provided by Wendy Anderson of ALDF and the law firm of Meyer & Glitsenstein.
The Ins and Outs of the WTO

The premise of the WTO and its predecessors is to “liberalize” trade between nations by progressively dropping tariffs and other trade restrictions. However, in an effort to increase the free flow of products across the globe, the WTO prevents import restrictions based on the process by which a product is created and prevents any member country from enacting legislation or regulations that treat one nation differently than another. This is not surprising, but the European Parliament has developed a fairly strong position on the subject. On July 3, 2003, by a vote of 297 to 93, the Parliament approved a resolution that “calls for enhanced recognition of non-trade aspects of agricultural policy by strengthening non-trade-distorting agricultural support measures through the ‘green box’, to ensure that well-targeted and transparent support measures to promote environmental and rural development, employment and animal welfare goals are exempted from reduction commitments...” (emphasis added).

AWI will push hard for WTO members to include animal welfare protection more clearly during the negotiations.

The OUTSIDE ACTION

While AWI staff monitor negotiations in the meeting, Special Projects Consultant Ben White will mobilize the public outside.

After massive protests shocked the WTO to a standstill in Seattle in 1999, the group held its next meeting in Doha, Qatar, far away from demonstrators’ questions concerning the extension of corporate trade rules over democracy. Delegates in Cancun will be sequestered in the “Hotel Zone,” a 22 kilometer long barrier island of glitzy hotels separated from the city by causeways; hotel workers commute from dusty tenements on the mainland.

AWI again will be the primary animal protection organization dramatizing the way in which WTO policies are disadvantageous to global humane and conservation efforts. In Seattle, our sea turtle costumes, worn by 240 volunteers, carried the message that no international treaty should have the power to prevent import restrictions based on the process by which a product is created. In Cancun, we will march a school of activists in dolphin costumes. You can look for the dolphins on the television coverage of the event...or you can come to Cancun and wear one for yourself! Contact Ben at freedom@awionline.org if you want more information.

The WTO embodies a new world order of undemocratic corporate control of commerce. But citizens across the globe are fighting back in defense of human rights, social justice, democracy, environmental safeguards, and animal protection. A new corporation has been born based on fairness, empowerment, and transparency: global civil society. The voice of this unified movement will be heard loud and clear in Cancun.

THE INSIDE SCOOP

For more than a decade AWI has reported on the draconian trade rules governing global commerce: the General Agreement on Tariffs and Trade (GATT), the North American Free Trade Agreement (NAFTA), and the monolithic World Trade Organization (WTO). Meanwhile, we have fought to preserve animal protection rules and regulations against attempts to use trade policies to undermine democratically-enacted humane laws.

As AWI prepares to attend the upcoming WTO Ministerial Meeting in Cancun, Mexico from September 10-14, 2003, it is clear that our efforts on behalf of all animals are needed now more than ever.

Become a “Free Trade” Expert in Ten Minutes!

Just in time for the swirl of activity in Cancun, AWI is pleased to announce a new addition to its colorful and informative brochure series— “Free Trade.” The leaflet details examples of the wide ranging negative impacts of free trade agreements on animal protection and conservation legislation across the globe including the European Union’s efforts to prevent importation of furs from animals caught in steel jaw leghold traps and the notorious case involving canned tuna fish and American efforts to keep dolphin-deadly tuna out of the American market. This handy brochure outlines how trade agreements work (and don’t work) and how conflicts arise with hard-won animal protection laws. Send a self-addressed, stamped envelope for your free copy or download it from www.awionline.org.

USTR’s Pig Politics

USTR factsheet on “U.S. Pork Industry & Trade” cheers America’s annual export of over 700 thousand metric tons of pork, valued at more than $1.5 billion. This, claims USTR, generates “wealth and creates[s] good paying jobs that contribute significantly to the economic well-being of rural America.” But American family farmers don’t benefit; it’s the corporate agribusinesses that dominate the domestic and foreign markets, subjecting pigs to intensive confinement.

USTR is brazenly using the Central America Free Trade Agreement to eliminate the “sanitary barriers” that contribute to American pork exports from being restricted in the region. “Sanitary” measures are rules on food safety to prevent the spread of diseases and toxins, through the food supply.

USTR is also trying to undermine “China’s zero tolerance on pathogens (listeria and salmonella) in raw meat.”

“Opening the Australian market for U.S. pork exports is a priority for the Bush Administration,” says USTR. The U.S. won’t let food safety issues interfere with our ability to flood a market with cheap hog factory pork. “Australia has sanitary/animal health barriers that keep imported pork out. USTR is pushing the Australian government to develop a new, science-based pork import policy.” Rather than improve our food safety, the U.S. wants to force other nations to lower their standards. When scientific findings are not suitable to USTR, we simply challenge those findings as not being based on sound science.

“Free” trade isn’t free for small-scale family farmers. Reducing trade barriers facilitates the flow of cheap pork products from animal factories.
Helping Small-Scale North Carolina Farmers Improve Pigs’ Lives

In Fall of 2000, Professor Chuck Talbott of North Carolina Agricultural and Technical State University (NCATSU) invited Diane Halverson to speak about AWI’s humane husbandry standards for pigs at a Carolina Farm Stewardship Association (CFSA) conference. Paul Willis, Iowa pig farmer and manager of Nimat Ranch Pork Company, the first company to embrace AWI’s standards, also spoke. When Dr. Talbott first read about Nimat Ranch and AWI, he envisioned a program in which small-scale North Carolina pig farmers could be provided with a humane, sustainable alternative to contracting with factory hog operations to raise their hogs. In so doing, they would demonstrate their vital roles in enhancing rural communities, avoid the environmental damage commonly associated with factory hog operations, and give pigs freer lives.

Enough farmers expressed interest at the CFSA conference that Dr. Talbott applied for financial help to North Carolina’s Golden LEAF Foundation, which helps tobacco farmers switch to non-tobacco enterprises, and Heifer Project International (HPI), which provides breeding animals to new or limited resource farmers.

Today, there are 28 small-scale North Carolina farmers in or about to enter the NCATSU-Golden LEAF-HPI program. Several farmers who initially received breeding hogs from Paul Wil- liam’s Iowa farm through an HPI grant have raised new hogs to pass on to the next group of farmers entering the program (a condition of the HPI grant). Golden LEAF funds pay for fencing, portable shelters for the pastures, and watering and feeding equipment.

Dr. Talbott’s assistants (Mike Jones and Eliza Maclean) provide daily technical support for the farmers. All pigs in the program are raised outdoors with plenty of space and varied environments in which to perform their natural behaviors, including wooded areas with welcome shade during the hot North Carolina summer days. AWI staff conduct site visits to the farms and prescribe changes, where necessary, for the farmers to meet AWI’s standards. The meat from the pigs raised by the farmers that meet AWI’s standards is sold to Nimat Ranch and distributed in the East Coast market for pork from humane/raising methods.

AWI is grateful to contribute to this effort and improve the lives of pigs while helping small-scale farmers survive by adopting humane, sustainable alternatives to contract hog production.

Learn About the Dirty Secrets of Animal Factories

Thanks to the Edith J. Goode Residuary Trust, AWI’s series of educational brochures now includes a farm animal leaflet. Humane family farms are increasingly displaced by corporations that confine animals to factory conditions, and this brochure describes the common and indiscriminate inhumane industry practices endured by chickens, pigs, and cattle. It thoughtfully details the routine mutilations inflicted on animals in factories and explains how cages and crates are utilized to keep animals immobile. The brochure also informs of the detrimental ramifications to human health and the environment. Send a self-addressed, stamped envelope or download it from www.awionaline.org to educate yourself and others about the unnecessary suffering of farm animals and how you can help stop it.

Buckeye Egg Factory Closed

Fate of 13 Million Hens Unknown

After more than two decades of abysmal cruelty and environmental degradation, the Ohio Department of Agriculture finally ordered the closure of all 90 Buckeye egg factories. Buckeye’s demise is due in large part to the persistent efforts of concerned citizens unwilling to tolerate the nuisances associated with animal factories. Buckeye, which confines over 13,000,000 laying hens to battery cages, should be closed by June 1, 2004. However, Buckeye has appealed, and Japan-based Is Farm and Ohio Fresh Eggs may buy the facilities. The celebration of Buckeye’s closure is short-lived if the cruelty to laying hens simply continues under another name.

Of utmost concern is the welfare of the hens. Buckeye estimates it would have to kill 464,000 to 576,000 chickens per week to comply with the order. Humane euthanasia of such massive numbers of birds is unlikely. Or the birds could be slaughtered for soup and animal food. The future looks bleak for most of the birds, but as we go to press, our friends at Oohmahnee Farm are set to rescue 1,000 of the hens. Hopefully, the compassion shown to these birds will be extended to others, who can be rescued or killed in a truly humane manner.

Buckeye’s inability to comply with even minimal environmental laws underscores the fact that it is inherently cruel and problematic to confine millions of animals to factories. Compassionate consumers should not support the cruelty of any egg factory. If you consume eggs, please be certain they come from cage-free farms that have access to pasture.

The headlines are as frightening as they are surreal: “Pet Tiger Euthanized After Biting Pregnant Woman,” “Lion Limping on Tri-State Streets,” “Supersized Snake Sniffs Out of Tank in Slick Escape.” Unfortunately, the reality behind these media tales is not only horrifying, but true. Wild, exotic, and often dangerous animals increasingly are being kept as personal pets or allowed to interact with the general public, despite the great risks involved in such animal companionship.

No longer are “domestic” dogs, cats, and hamsters—or even parrots and iguanas—enough to satisfy some pet fanciers. Lions, tigers, cougars, bears, monkeys, Gila monsters, boa constrictors, wallabies, and even obscure African rodents inhabit bedrooms and backyards across America. Some humans who live with these animals are remarkably ill-prepared to care for them sufficiently.

Not Your Average House Cat

There are more tigers in captivity in the United States than there are in the wild worldwide. The allure of that cute tiger cub will someday evaporate as the animal’s innate, wild behavior surfaces.

Since exotic pets are made available more cheaply (a tiger cub can cost roughly the same as a purebred puppy) and more conveniently (internet sales and local auctions provide a ready supply of wildlife to those eager for such pets) the number of different species in trade grew by 75%. “Overall,” according to Marshall Jones of the United States Fish and Wildlife Service (USFWS), between 1992 and 2002, U.S. trade in wildlife and wildlife products increased by 62% and the number of different species in trade grew by 75%. “Overall,” Jones declares, “in 2002, over 38,000 live mammals, 365,000 live birds, 243,000 reptiles, 49 million live amphibians, and 216 million live fish were imported into the United States.” In one year, about 267 million individual living creatures (roughly the human population of the United States) were imported into the country.

Where are these animals going? There are more than 2,500 animal exhibitors licensed by the United States Department of Agriculture (USDA) under the Animal Welfare Act. USDA includes circuses, zoos, roadside menageries, petting zoos, and marine mammal parks in this category. There are some exemptions to the licensing requirement including pet shows, rodeos, and exhibitions showing only “agricultural” animals.

The majesty of these animals, once coupled with their accessibility, creates a scenario in which members of the general public are no longer content to see these animals in a licensed facility, but want to own them as pets—despite the fact that they likely lack the knowledge, experience, or infrastructure to house and care for these wild animals appropriately. Keeping exotic animals as pets is like sticking your head in a lion’s mouth: you never really know when the animal will decide he’s had enough and bite.

Keeping Exotics is Bad for Everyone

According to the Captive Wild Animal Protection Coalition (CWAPC), it is estimated that 90% of the exotic pets that survive capture and transport are dead within two years in captivity. CWAPC, which tracks incidents involving captive wildlife, presents a grim outlook on the prospects for keeping exotics safely—either as personal pets or in facilities where the public can have direct interaction with them.

A few stories about human injuries and deaths should be enough to steer anyone to an animal shelter for a domestic dog or cat: pet tigers, lions, and bears have mauled their “owners” to death; a petting zoo buffalo killed his caretaker; a leaped in a amusement park killed a woman visitor.

Animals in some exhibition facilities, including standard zoos and refugees, also face injury and death: tigers and lions have been shot by police after escaping their enclosures, a black bear died at a wildlife park in Illinois after ingesting a ball, and hundreds of animals of all species have been confiscated after being subjected to neglect and cruelty. Other animals escape their captive homes and, luckily, also escape conflict with humans or other animals: lions have escaped from sanctuaries, a polar bear escaped his enclosure at the Denver Zoo, monkeys escaped from a dealer’s facility in Miami, and baby pythons escaped from an animal wholesaler in Maryland. Fears are rising in the wake of SARS, West Nile virus, and Monkeypox virus that importation of live exotic wildlife can also have a devastating impact on domestic animal and human health. Dr. Stephen Ostroff of the Centers for Disease Control and Prevention (CDC) notes, “More than half of these newly emerging infectious diseases have their origin in animals.” This is not new knowledge—just newly-discovered diseases. It has long been recognized, for instance, that salmonella can be transmitted from pet reptiles to humans.

A few stories about human injuries and deaths should be enough to steer anyone to an animal shelter for a domestic dog or cat: pet tigers, lions, and bears have mauled their “owners” to death; a petting zoo buffalo killed his caretaker; a leaped in a amusement park killed a woman visitor.

The latest outbreak, monkeypox, is suspected of affecting at least 72 people in six Midwest states according to the CDC (see box on page 10). It should be noted that live wildlife shipments for the pet trade are not the only risk. Mr. Jones of the USFWS notes that wild animal flesh (“bushmeat”) is continually imported into the U.S. surreptitiously. One routine inspection at a refrigerated warehouse uncovered rodent bushmeat from Africa in a shipment from Ghana labeled as containing fish for human consumption.

Leave Wildlife in the Wild

A number of actions have been taken and proposed to address the panoply of dangers associated with importation and ownership of exotic wildlife. In the short term, CDC has prohibited the transport and sale of prairie dogs, tree squirrels, rope squirrels, dormice, Gambian giant rats, brush-tailed porcupines, and striped mice. This limited ban on live wildlife imports is an important step, but obviously only gets at one part of the potential problem.

Congress has begun to pay serious attention to the issue as well. The Senate Environment and Public Works Committee held a hearing on July 17, 2003, on the importation of exotic species. Senator Wayne Allard (R-CO), a veterinarian by profession, presided over the hearing. Senator Allard highlighted a government report that found that “nearly three out of four emerging diseases reach humans through animals.” To his credit, Senator Allard also discussed the “high rate of mortality in exotic species.” The Senator continued: “This occurs during shipment and after the animal is purchased and taken home. Another problem I see is that few people are qualified to properly care for an exotic animal. The animals often end up neglected or cared for in an inappropriate manner. I do not think that this is acceptable. Pets are a huge responsibility and the decision to adopt one should not be taken lightly.”

Senator James Jeffords (I-VT) also attended the hearing and concluded: “… our nation may be more vulnerable from an unintended outbreak transmitted by an exotic species than from a foreign nation...we have a responsibility to act before it is too late.”

Senator Jeffords has acted to address at least one component of the overall issue of exotic pet ownership by introducing the Captive Wildlife Safety Act (S. 269). A companion bill has been introduced in the House of Representatives by Congressman Howard “Buck” McKeon (R-CA) (H.R. 1006). The bills would prohibit the import, export, and interstate commercial shipments of certain exotic animals including lions, tigers, leopards, cheetahs, jaguars, macaws, and other birds, which has been passed by the Subcommittee on Fisheries Conservation, Wildlife and Oceans, also includes a prohibition on trade in lion/tiger hybrids. The legislation is restricted to prohibiting big cats from being owned as pets by private citizens. It does
Two USFWS inspectors peel off their disposable Tivex suits to put them in the “burn bag” after inspecting a shipment of 5 live primates at Seattle’s airport.

SPRING 2003

EATING APES

Eating ApeS by Dale Pe
terson is well written in a comfortable style. This excellent and easy to read prose contrasts with the disturbing facts it presents of the ongoing genocides motivated by western civilization’s penchant for greed and power. When you consider that indige

not address the larger impact of other potentially dangerous exotic pets such as bears, primates, reptiles, and other animals, nor does it address the larger issue of disease transmission from certain wildlife. Moreover, though getting exotic big cats out of people’s homes is a laudable goal, there are countless roadside zoos and other facilities that are ill-equipped to handle such wildlife and prevent dangerous exotic species from escaping or injuring human visitors. Unfortunately, the bill includes an exemption that allows any individual licensed and inspected by USDA to receive or otherwise trade in exotic big cats—USDA licensing is a remarkably easy process that most anyone could attain. While the bill should be much more restrictive, it is a step in the right direction. Twelve states already prohibit private possession of exotic big cats (though a loophole remains as long as these individuals can get licensed by USDA).

Sometimes, animals that are in sub-par facilities are lucky enough to be confiscated, but sanctuaries—even the best of them—are under-funded and lack the room to take on the vast number of animals at his facility, Tiger Rescue, in Colton, CA. A raid on this facility is currently being investigated by the USDA, with 50 tigers, 6 lions, and 6 leopards due to be confiscated, but sanctuaries—even the best of them—are under-funded and lack the room to take on the vast number of

(see Winter 2002, AWI Quarterly), 58 dead, frozen tiger carcasses including 58 dead, frozen tiger cubs. CWAPC Manager Kim Haddad, a veterinarian, visited Tiger Rescue in June. She writes: “It was one of the most hideous things I have ever seen. Many of the tigers have spent their entire lives in cramped, unsafe and filthy enclosures—so small that it would be unfathomable to leave dogs in them for more than a few hours at a time. These animals continue to fight, bleed and give birth because there is no safe way to separate them.”

Dr. Haddad notes that USDA has contacted her seeking help in placing more than 90 tigers, lions, and leopards in California and Texas. The homes and the finances for their long-term care simply are not available. So the options are poor: send confiscated exotics to sub-par facilities that will profit by their residency and provide a potentially dismal level of care, or euthanize them. Although euthanasia is unpalatable, it may be the most humane option in some circumstances. A better solution would be for Congress to not only ban private ownership of exotic big cats (and hopefully other species eventually) but also to create a federal fund that can be drawn from in order to provide for the long-term care of seized exotics. These innocent animals should not have to suffer twice from human greed and shortsightedness. Ultimately, the smartest decision is to leave wildlife in the wild. After all, there’s a reason they’re called “exotic.”

PLAYING RUSSIAN ROULETTE WITH WILDLIFE IMPORTS

The Winner Gets Monkeypox?

Jeffrey Doth of International Exotic Wildlife in Houston, Texas is in trouble again. In April, Doth shipped approximately 800 small mammals of nine different species from Ghana to the United States. A number of these animals were carriers of monkeypox.

Follow the trail… According to the analysis of Dr. Ostroff of the Centers for Disease Control and others, Gambian giant rats were imported illegally from Ghana to Texas and then sold to a distributor in Iowa who, in turn, sold them to a distributor in Chicago (Phil’s Pocket Pets of Villa Park). There, the Gambian giant rats were housed with prairie dogs and apparently transmitted the disease to them. These prairie dogs were ultimately sold as pets. The disease spread could be catastrophic if left unchecked. The disease spread could be catastrophic if left unchecked.

**A Bill to End the Use of Steel Jaw Leghold Traps**

T

**NEWs FROM CAPItOl HILL**

brought to you by the: SOCIETY FOR ANIMAL PROTECTIVE LEGISLATION

**AWI Adds Legislative Muscle**

AWI will continue producing insightful documents, and SAPL, now a division of the Animal Welfare Institute, will carry that information to Capitol Hill to ensure that Mem-

bers of the United States Senate and House of Representa-

tives hear our message and bring all animals under the most protective umbrella that the Congress can bestow.

As part of our marriage, the AWI Quarterly will now carry a legislative page to provide updates on pending bills with which we are concerned or, as you will note in this issue’s feature on exotic and story on marine mammals, discussion of legislation will be covered as part of a larger story. We hope you will use this information to contact your Congressional Representative and both of your United States Senators to urge appropriate action on the bills we highlight. Please raise no more than two issues within each letter to a Member of Congress (write a second letter if you need) and send copies of the responses you receive from your elected officials to our office to assist us in our lobbying efforts.

**You Can Make a Difference**

- Urge both of your Senators to cosponsor S. 128, the Crane Conservation Act; and S. 1210, the Marine Turtle Conservation Act.
- Urge your Representative to cosponsor H.R. 1647, the House version of the Crane Conservation Act; and H.R. 1800, a bill to end the use of steel jaw leghold traps.
- Address Senators as: The Honorable (full name), United States Senate, Washington, DC 20510, Address Representatives as: The Honorable (full name), United States House of Representatives, Washington, DC 20515.
- Visit SAPL’s web page for information on other significant animal protection bills. There you will find information about our efforts to stop horse slaughter and prevent people’s pets from being stolen or fraudulently acquired for experimentation. Check www.saplonline.org for updates and actions you can take to make your voice heard on Capitol Hill.

**Sea Turtle Restoration Project**

Coralica’s Environment Minister recently asked Florida Governor Jeb Bush for help protecting green sea turtles. Passage of S. 1210 would provide funds to help all sea turtles across the globe.

**Summer 2003**

Summer 2003
The Tide Turns at the IWC

The differences of opinion at the annual meetings of the International Whaling Commission are so familiar and fundamental that observers have become accustomed to deadlock. But this year in Berlin, where the Commission met in plenary session from June 16-19, it was hard not to feel the logjam breaking up—in the whales’ favor.

On the very first day, over the thunderous objections of the Norwegian and Japanese delegations and their supporters, the Commission gavied into existence a new conservation committee by a vote of 25-20. Normally, the creation of yet another committee would hardly be cause for celebration, but this one clearly signaled a shift towards whale protection and away from the killing of whales. The new committee was fought vigorously by the whalers because it will focus on conservation, and gather information and recommend solutions on bycatch (drowning of whales and dolphins in fishing nets) and the growing environmental threats to whales such as toxic contamination and LFA sonar, information not likely to please their assertion that there are plenty of healthy whales to kill. Non-governmental organizations will need to work hard with their governments over the next year to see the committee become effective; Japan, Norway, Iceland, and their allies have stated their intent to undermine the decision.

The vote spread also indicated that the Japanese have perhaps hit a high-water mark in their purchase of the commission through “economic assistance” to developing countries. Although they added two more countries to their choirs line (Nicaragua and Belize), they still lack the numbers to carry a simple majority, much less the 3/4 vote necessary on “schedule changes” such as dropping the moratorium on commercial whaling. While they were able to block important major initiatives such as the creation of whale sanctuaries in the South Pacific and South Atlantic, they could not stop the conservation committee, two votes condemning their bogus “scientific” whales, the vote against their “small-scale coastal whaling,” or the vote against allowing secret ballots. In a low moment before the conservation committee discussion, Japan and its pro-whaling allies moved to strike all conservation issues from the agenda; fortunately, that was turned back.

Apparently, Japan’s whaling industry has collided with a new economic powerhouse with far more clout than even they can muster: whale watching. Having rejoined the Commission this year with its reservation on the moratorium on commercial whaling intact, Iceland immediately announced its intention to begin its own yearly “scientific” whale-kill of 100 fin whales and 50 sei whales (classified as endangered by the International Union for the Conservation of Nature) as early as 2004. Despite the belligerence of their Commissioner, Stefan Aasmundsson, within the IWC, these plans may be derailed by pressure at home. Icelandic whale watchers, who earned over $8 million from 90,000 visitors in 2001, have joined with Icelandair and the powerful Icelandic fishing industry to oppose the resumption of whaling.

Other information presented leaves no doubt that killing whales for food in the year 2003 is a brutal anachronism: the vote against their “small-scale coastal whaling,” or the vote against allowing secret ballots. In a low moment before the conservation committee discussion, Japan and its pro-whaling allies moved to strike all conservation issues from the agenda; fortunately, that was turned back.

The newly formed International Association of Whale Watchers attended the meeting for the first time and gave a press conference announcing their intention to begin its own yearly “scientific” whale-kill of 100 fin whales and 50 sei whales (classified as endangered by the International Union for the Conservation of Nature) as early as 2004. Despite the belligerence of their Commissioner, Stefan Aasmundsson, within the IWC, these plans may be derailed by pressure at home. Other information presented leaves no doubt that killing whales for food in the year 2003 is a brutal anachronism: the vote against their “small-scale coastal whaling,” or the vote against allowing secret ballots. In a low moment before the conservation committee discussion, Japan and its pro-whaling allies moved to strike all conservation issues from the agenda; fortunately, that was turned back.

The newly formed International Association of Whale Watchers attended the meeting for the first time and gave a press conference announcing their intention to begin its own yearly “scientific” whale-kill of 100 fin whales and 50 sei whales (classified as endangered by the International Union for the Conservation of Nature) as early as 2004. Despite the belligerence of their Commissioner, Stefan Aasmundsson, within the IWC, these plans may be derailed by pressure at home. Icelandic whale watchers, who earned over $8 million from 90,000 visitors in 2001, have joined with Icelandair and the powerful Icelandic fishing industry to oppose the resumption of whaling.

Oceania’s so-called aboriginal subsistence whaling was criticized for its huge commercial component and the recent slaughter of 32 orca whales.

AWI has attended the IWC meetings since the Commissioner’s inception. We oppose all forms of whaling except those that are truly necessary for aboriginal subsistence.

Congressional Assault on Marine Mammals

The U.S. Congress is currently engaged in a two-pronged attack against the Marine Mammal Protection Act (MMPA), one of our most important animal protection laws. The House of Representatives’ version of a Department of Defense (DOD) authorization bill, currently pending in a conference committee (where the House and Senate resolve differences in the bill), would allow for broad exemptions from the law not only to the military but to anyone else, including researchers, fishermen, and defense contractors.

DOD wants to change the MMPA definition of “harassment” radically. Rather than referring to activities that injure, torment, or disrupt marine mammals’ behavior, the change would mean that only activities causing “biologically significant disruption” would be curtailed. This level of substantiation is very difficult to ascertain, and switches the burden of proof to the government, which would need to show that the disruption was “biologically significant” before protecting marine mammals.

Another recommended change would eviscerate the MMPA further by removing the two primary limitations on the granting of “incidental take” permits. The most serious limitation, that only activities causing “biologically significant disruption” would be geographically limited and that the numbers of creatures affected be small. This would enable the Navy, or any other permit applicant, to kill or injure huge numbers of marine mammals across the oceans with impunity. This one change in language would virtually destroy the ability of the MMPA to protect marine mammals from being harmed or killed incidentally in fisheries, scientific research, and the deployment of devices such as active sonar and air-guns. Some of the impetus for these proposed changes stem from the Navy’s desire to deploy its Low Frequency Active sonar over 80% of the world’s oceans, potentially slaughtering broad swaths of whales, dolphins and fish with its ear-shattering 234 decibels.

Meanwhile, a bill to reauthorize the MMPA itself (H.R. 2693) has been introduced by the Chairman of the House Resources Committee, Richard Pombo (R-CA) and the Chairman of the Committee’s Fisheries Conservation, Wildlife and Oceans Subcommittee, Wayne Gilchrest (R-MD). This bill also would weaken the MMPA by changing the definition of harassment and weakening the restrictions concerning the “incidental taking” of marine mammals.

Members of Congress should see through these underhanded attempts to weaken protection for marine mammals. Urge your legislators to reject the DOD’s unacceptable changes to the MMPA and oppose the Gilchrest/Pombo bill as currently drafted. (See the box on page 13 for addresses in Congress.)

AWI has attended the IWC meetings since the Commissioner’s inception. We oppose all forms of whaling except those that are truly necessary for aboriginal subsistence.

Bequests to AWI

If you would like to help assure the Animal Welfare Institute’s future through a provision in your will, this general form of bequest is suggested:

I give, devise and bequeath to the Animal Welfare Institute, located in Washington, D.C., the sum of $ (specifically described property).

Donations to AWI, a not-for-profit corporation exempt under Internal Revenue Code Section 501(c)(3), are tax deductible.

We welcome any inquiries you may have in these areas where you have specific wishes about the disposition of your bequest, we suggest you discuss such provisions with your attorney.
As anarchy reigns in the South Pacific nation of the Solomon Islands, 200 dolphins or more were cruelly captured for export to amusement parks in Mexico and possibly Asia. Some dolphins reportedly died while in the holding pens awaiting shipment; one, horribly, after being attacked by a crocodile. Mexico has confirmed that at least one dolphin already has died at the aquatic park there.

Despite an international outcry by animal protection and conservation organizations, 28 of the dolphins (13 females and 15 males) endured a terrifying day’s journey to Parque Nizuc in the resort city of Cancun, Mexico. The water park boasts an attraction allowing visitors to swim with the dolphins, which one review describes as including the indignity of a “foot push” a phrase describing a “ride on a pair of dolphins who lift you and push you through the water with their snouts.” Wild dolphins may swim with more than 100 comrades and can live for three decades or more. But these unlucky animals will have no such future as they were swept away by chartered plane in what more than one observer referred to as “coffin-like” containers.

What is a live dolphin worth? In the Solomon’s, rumors abound on the price these animals fetched—from $60 to $400. If they survive transport and “training,” this investment can suddenly be worth $30,000 to the amusement park industry. Potential customers from Thailand and Taiwan purportedly have visited the holding area in the Solomon Islands possibly to purchase the remaining animals.

AWI is mystified that the Mexican authorities allowed the import to take place. The Solomon Islands is not a Party to the Convention on International Trade in Endangered Species (CITES), which governs the global wildlife trade. But these animals cannot be protected in the Solomon Islands because the authorities in that nation did not follow the guidelines of the convention. As a result, the dolphins were exported without permission from CITES authorities. Moreover, CITES mandates that live animals for export be prepared “as to minimize the risk of injury, damage to health or cruel treatment.” Clearly, given that some dolphins have already died in the holding pens, CITES is being violated.

This is a perfect example of the potentially devastating consequences of making wildlife management decisions based on inadequate information and overwhelming greed, in addition to the tragedy of uneducated tourism. Most of those paying to swim with these dolphins are Americans seeking a transcendental experience without a clue that their pursuit of vacation pleasure is financing such suffering.

### YOU CAN MAKE A DIFFERENCE

Please write to the General Director of Wildlife in Mexico and urge her to return the dolphins to the wild immediately and prohibit forever the capture and importation of live dolphins for public exhibition and amusement.

Write to: M.V.Z. Georgita J. Ruiz Michel Funge, Directora General de Vida Silvestre, Subsecretaría de Gestión para la Protección Ambiental, Secretaría de Medio Ambiente y Recursos Naturales (SEMARNAT), Av. Revolución 1425 Nivel 1 Col. Tlacopac, San Ángel Deleg. Álvaro Obregón, 01040 MÉXICO, D.F.
